

# Final Web Site Report

Name: Hector de Jesus Rodriguez Mendoza  
WDD 130

## Audience:

The principal audience for this project is in general and more specifically people who want to know more about coding or more important people who are interested in learning coding. We want to help people to feel comfortable with our page letting people know that our sources are good.

## Goals / Objective:

In our web page our principal goal is to help our users to feel comfortable with the information we provide here. We want to give them the confidence to look and also find what they are looking for, providing reasonable sources and information that will make their learning journey easy and trustful. We focus on everyone and we want you to feel comfortable with what you are learning in this amazing field.

## Design Process:

The design for this project was really fun. I started thinking firstable before anything about the Logo. I wanted something simple but also involved code and my favorite colors and finally I chose this Logo that we have in our page. The warframe were really helpful, made me consider and also add more information and some extra information for example the header I choose the home page and also I added the two subpaged at the beginning of the warframe I that that would be nice if I added the Logo bigger that the divisor of the header and the adding the pages but at the end I decided to lived smaller and align with the pages. Also the images included in all the three pages were a little challenging, first I imagined them to be the same size but through the design I noticed that maybe the images needed to be a little smaller and that decision made the text I added more noticeable. The founts were also something that I chose using my logo as reference also the colors, in the warframe I wanted to use yellow in my header and footer but thought the design I notice that yellow its a little annoying and I change it.

### **Conclusion:**

As conclusion I will say that I feel realize for what I made, I never imagined that I will be able to make something like this page I know that with experience I will accomplish more structured projects. I acquire so many skills that make me feel capable of making any webpage through the start of a simple HTML to decorate using CSS adding form and life to my project. I know that with these skills I will do great things and this is just the beginning and I can't wait to know what else I'll be learning.
